## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, drawn to a transport system for automatic sample testing machine, classified in class 422, subclass 63.
  - II. Claims 10-12 and 18-19, drawn to an automatic sample testing machine, classified in class 422, subclass 50.
  - III. Claims 13-17, drawn to a method of determining a position of a carrier moved through a sample testing machine, classified in class 73, subclass 1.85.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the sample testing machine does not require the particulars of the transport system as claimed, such as, for example, the particulars of

Art Unit: 1743

the drive subsystem of claim 1. The transport system can be employed with different types of automatic machines manipulating various articles.

3. Inventions III and I, II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the transport system for automatic sample testing machine and the automatic sample testing machine have different effects, compared to the method of determining a position of a sample carrier.

4. Note that, if elected, the claims of group I will be subject to further restriction, since they contain claims directed to the following patentably distinct species of the claimed invention:

Species I, claims 1-5, drawn to a transport system, as recited, which includes carrier position tracking sensors disposed along the carrier path;

Species II, claims 6-9, drawn to a transport system including a ramp at the entrance station;

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim

Art Unit: 1743

is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Mr. Samir Patel on 01/30/07 to request an oral election to the above restriction requirement, but did not result in an election being made.
